Chapter 1. INTRODUCTION	1
1.1. General idea about model order reduction	1
1.2. Key features of model order reduction	4
1.3. Need of model order reduction	4
1.4. Performance characteristics of physical system	5
1.4.1. Time-domain performance characteristics	6
1.4.2. Frequency domain performance characteristics	7
1.5. Representation of linear & dynamic systems	8
1.5.1. Transfer function representation	8
1.5.2. State space representation	9
1.6. Existing methods of model order reduction	9
1.6.1. Continued fraction expansion	9
1.6.2. Moment matching algorithm	10
1.6.3. Padé approximation	10
1.6.4. Stability equation method	11
1.6.5. Factor division method	12
1.6.6. Balanced truncation method	12
1.6.7. Hankel norm approximation	13

1.6.8. Balanced stochastic technique	13
1.6.9. Projection Technique	14
1.6.10. Impulse energy approximation technique	15
1.6.11. Schur decomposition	15
1.6.12. Least square method	16
1.6.13. Routh approximation technique	17
1.6.14. Response matching technique	17
1.6.15. Soft computing based model order reduction	18
1.6.15.1. Population-based solution soft computing approach	18
1.6.15.2. Single solution based optimization	20
1.6.16. Mixed approach	21
1.7. Applications of model order reduction	22
1.8. Basic idea of controllers	23
1.9. Types of controller	24
1.10. Degree of freedom of a controller	27
1.11. Load frequency control	27
1.11.1. Integral control	28
1.11.2. Sliding mode control	28
1.11.3. Intelligent control	29
1.11.4. Self-tuning and adaptive control	30
1.11.5. PID control	30
1.11.6. IP control	31
1.11.7. Robust control	31
1.11.8. Internal model control (IMC)	31
1.12. Area of a power system	33
1.13. Novelty and contribution of present work	33
1.14. Organization of thesis	34
Chapter 2. LITERATURE SURVEY	36
Chapter 3. RESEARCH GAPS & OBJECTIVES	51
3.1 Objectives of Research	53

Chapter 4. METHODOLOGY	54
4.1. Methodology for reducing model order	54
4.2. Methodology for design of LFC controller	64
Chapter 5. RESULTS & DISCUSSION	71
5.1. Reduction of continuous time SISO systems	72
5.2. Reducing discrete-time systems	128
5.3. Reduction of multivariable MIMO systems	153
5.4. Design of controller	185
Chapter 6. CONCLUSION & FUTURE SCOPE	222
